## The Anatomy.

Should I but dare to omit the Anatomy,
Which long enough hath gull'd my Country Friend;

Ask him it's Uſe? He'll ſay, he cannot tell,
No more can I; yet ſince he likes it well,
I'll let it ſtand, becauſe my Book ſhould ſell.

## *The Tide-Table explained.*

IN the first Column you have the Point of the Compass, to which the Moon coming, makes full Sea at those Havens mentioned in the second Column; and in the third Column are the Hours and Minutes to be added to the Time of the Moon's southing. I shall make it plain by an Example.

The 10th Day of *February*, 1742. I would know at what Hour it will be full Sea at *London-Bridge*, at which Time, (accounting from the Change,) I find the Moon 16 Days old, which Age I find in the Bottom of the Table; and under the same 0 Hours, 48 Min. Afternoon, the time of the Moon's coming to the South; then finding in the first Column on the left hand, that a South West Moon makes full Sea at *London-Bridge*, I add to her Southing 3 Hours, and it makes 3 Hours 48 Min. for the Time of High-Water at *London-Bridge* that Afternoon. Observe also, that when the Moon cometh to the contrary (or North East Point) it is there full Sea again. *Note*, That Land-Floods, Spring-Tides, and contrary Winds, make it sooner or later about an Hour.

## *An Account of the Moveable Feasts.*

THE moveable Feasts are so called, for that they have not any fixed Place in the Kalendar, as the fixed Feast Days of the Saints, which are always on the same Days of the Month; but they are varied every Year according to the Diversity of the Moon, and do fall sometimes later, and sometimes sooner.

*Quinquagesima* is Shrove-Sunday. *Sexagesima* is the Sunday next before Shrove-Sunday. *Septuagesima* is the Sunday Fortnight before Shrove-Sunday, so called in Remembrance of the 70 Years that the *Israelites* were under the *Babylonians*.

Quin-

*Quadrageſima* is the firſt Sunday in Lent, ſo called in Remembrance of the 40 Days that *Moſes* faſted when they received the Law.

*Eaſter* is the principal Feaſt of all other.

*Rogation Sunday* is the Sunday Fortnight before Witſunday, ſo called *quia vos rogat Eccleſia*; the Church commands us to continue Faſting, Proceſſions, and Prayers againſt bodily and ſpiritual Wolves.

*Pentecoſt* is *Quinquageſimus*, ſo called becauſe there be 50 Days betwixt Eaſter and Whitſunday inclusively, obſerved in Remembrance of the Law given to *Moſes*, and to the Holy Ghoſt that appeared to the Apoſtles like cloven Tongues, *Acts* ii. 1.

*Trinity-Sunday* is the next Sunday after Whitſunday. Aſcenſion Day is the Thurſday Seven-night before Whitſunday; and *Corpus Chriſti* is the Thurſday Seven-night after Whitſunday. Advent Sunday is the Day before *Barbara* Day, which is always the 4th of *December*.

Before any thing is ſaid concerning Days, Weeks, or Months, which are Parts of Time, I hold it fit to ſpeak ſomewhat firſt of Time, and then of the chiefeſt Parts thereof.

## *Of Time.*

TIME is the Meaſurer of Motion, or a Number meaſuring the moving of the firſt moveable and other mutable Things; which Time had his Beginning with the World, and ſhall end with

the ſame. It conſiſteth of two Parts; that is, firſt and laſt, or before and after; both which are knit together in the Word (*Nunc*) now, or at this preſent, which is the End of that which went before, and the Beginning of that which followeth after. Some divide Time into three Parts, paſt, preſent, and to come. Time preſent is a Moment indiviſible, the Beginner and Ender of Time, and yet the leaſt Part thereof itſelf.

Time is alſo divided into greater or leſſer Parts; the greater are Calends, Nones, Ides, a Week, a Month, a Year, &c. There is a Space of Time called *Seculum*, an Age, or a Hundred Years. Another ſpace of Time is called *Ævum*, Ten Ages. The leſſer Parts of Time are Five. The firſt is called *Quadrans*, the fourth part of a Day, or ſix Hours. The Second *Punctus*, the fourth part of an Hour in the Sun's Account, and in the Moon's the fifth part. The third *Momentum*, the tenth part of *Punctus*. The fourth *Uncia*, the twelfth part of *Momentum*. The fifth *Motus*, the forty-eighth part of *Uncia*.

## *Of a Day.*

A Natural Day is the Space of 24 Hours, in which the Sun is carried from the Eaſt to the Weſt, and ſo round about the World into the Eaſt again. An artificial Day is the Space that is between the riſing of the Sun, to the going down of the ſame; and the artificial Night is from the Sun's Setting to its Riſing.

Of

## Of a Week.

IT's commonly called in Latin *Septimana*, *à septem & mane*, which is as much as to ſay, Seven Mornings, or Seven Days, whereof the firſt is called Sunday, the ſecond Monday, *&c.* which Names the *Gentiles* gave to the Seven Days, in Honour to the Seven Planets, whom they worſhipped as Gods: For they called the firſt Day the Day of the Sun, the ſecond the Day of the Moon, and ſo forth.

---

## Of a Month.

SOlar, is that Space of Time in which the Sun runneth through any one to the 12 Signs, being 30 Days.

Lunar, is that Space of Time which the Moon ſpendeth, while departing from the Sun it returns to the ſame again.

Uſual, is that Number of Days which are ſet down in our common Kalendars, whereof ſome contain 30 Days ſome 31, and *February* 28, and when it is Leap-Year 29.

*Romulus* firſt divided the Year into 10 Months, and called the firſt Month *Martius*, *a Marte*; the ſecond *April*, *ab aperiendo*; the third *May*, *a majoribus*; the fourth *Junius*, *a Junioribus*; the reſt *Quintilis*, *Sextilis*, *September*, *October*, &c. becauſe they were 5, 6, 7, 8, *&c.* Months diſtant from *March*. But after, *Numa Pampilius* added two Months more to make 12, calling the one *January*, *a Janua*,

*a Janua*, becauſe it is a Gate to paſs by into the Year. And the other Month he called *Febru*, *a Februo*, *id eſt*, *a Plutone*, becauſe the *Romans* then offered Sacrifice to *Pluto*.

*Julius Cæſar* in his Time altered the Month *Quintilis* to *July*, calling it after his Name. After that *Auguſtus Cæſar* called the Month *Sextilis*, *Auguſt*, after his own Name.

---

## *Of a Year, and of the Leap-Year.*

IN *Latin* it is called *Annus* from *Annulus* a Ring, in reſpect they both turn round in themſelves. *In ſua ter veſtigia volvitur Annus.*

There be divers Kinds or Differences of Years, and divers Computations had thereof in divers Ages, and amongſt divers Nations; but I omit them, and will ſpeak only a word of the *Julian* Year, which is alſo twofold, common, and biſſextile, or Leap-Year; which ſaid common Year conſiſteth of 365 Days and 6 Hours, which 6 Hours, if they ſhould be reckoned at every Year's End, would make a great Confuſion, and therefore is reckoned at the End of every fourth Year, which makes the Leap-Year, conſiſting of 366 Days: For four times Six maketh 24 Hours, which is one whole natural Day, whereof that Year is called the Leap-Year which Day is added to *February*, becauſe it is the ſhorteſt Month, and this Day they put at the 24th of *February*, upon which St. *Matthias*'s Day falleth.

## The Use of the Table.

First girt the Piece about, then look the Length of that Girt under the Title Com. and against it is the Length of a Foot Solid, in Inches and Parts of Inches.

*Example.*

Suppose a Piece of Timber be 80 Inches about, then look 80 under the Title Com. and against it in the next Column towards the Right hand is three Inches, and 393 decimal Parts of an Inch, (that is 393 Thousand parts, supposing the Inch to be divided into 1000 Parts,) for the Length of a Foot.

For square Timber.

Divide always 1728 (the Cubick Inches, in a Foot Solid) by the Content at the End, and the Quotient shews the Length of a Foot Solid in Inches.

*Example.*

Let a Piece of Timber be 12 Inches broad, and 10 Inches deep at the End, and then the Content will be 120 Inches; which dividing 1728, the Quotient is 14 Inches, and $\frac{48}{120}$. Parts for the Length of a Foot Solid.

For Boards.

Divide always 144 (the Inches in a Foot Square) by the Breadth, and the Quotient shews the Length of a Foot square in Inches.

*Example.*

If a Board be 16 Inches broad, then 144 divided by 16, the Quotient is 9 Inches for the Length of a Foot according to that Breadth.

For Circles.

If the Circumference be given, multiply it by itself, and then by Seven; the last Production divide by 88, and the Quotient shews the Content. If the Diameter be only given, multiply it by itself, and then by 11; the last Product divide by 14, and the Quotient shews the Content.
